How to measure:

1) Start at one corner and measure to the end of your cabinet space. Round up to the nearest inch.
2) Repeat this step for each wall of cabinets required.
3) For islands, measure the space from cabinet end to cabinet end along the face of the cabinets required.
4) For peninsulas/Jut-outs, measure the distance from the wall to the end of the cabinet bases.
5) Calculate the total linear inches of all the measurements and enter this into the “Linear Length (inches)”

Examples:
